SECURINESS

Intelligent Video Surveillance

SECURINESS have considerable expertise and experience in high-end video surveillance and intelligent video surveillance. With technologies from three of the world's leading development and producing companies within the intelligent video surveillance, we can actually eliminate your need to "monitor" video in the traditional sense.

Intelligent video surveillance from SECURINESS

Different situations, buildings, businesses, organizations and governments have different needs and requirements within the intelligent video surveillance solutions. Some, for example, need to be informed about invasive on a defined area or the need for an internal / external alarm for driving while "normal" direction and others must be able to secure in areas with more than 100 cameras, we only "see" when something is not as predefined and thus have an active communication on that - when it happens.

With the options from SECURINESS - we will meet every need and requirements for Intelligent Video Surveillance, also to your existing video surveillance solutions - it's what we call for Tomorrow's SECURITY-thinking

Great Technology
Highlights from Great Technology solution (Analog)

Facial Recognition - With the help of facial recognition algorithm, the system can detect faces in realtime and store these images in the database. Face Detection could trigger PZT, sirens, email, GSM message or other specified offenses.

Line or area activation - Using the defined line or zone activation, the system can activate the PZT, sirens, email, GSM message, or other specific acts, if line or area to be exceeded by such people, boat, car, train, bus, etc.

Object - If the video monitored object is removed from the image, the system could send an alarm. The alarm will be triggered if the subject / object are placed in the area

HuberVision
Highlights from Huber Vision solution (Analogue & IP)

Huber Vision solution is based on hardware and software.

HuperVision provides various client applications, including HuperRemote, Remote Viewer, HuperRemote PDA and HuperRemote Phone, which allows you to manage, monitor and record surveillance video from a remote computer or with your handheld devices.

HuperCenter, the central management system is also included. It acts as a central station which enables you to monitor all suspicious situations and intrusions from multiple DVR sites in one place. The solution also contains "object" registration, registration of fire and virtual fence overrun. The system can handle up to 64 cameras simultaneously and generate detailed event logs of control.
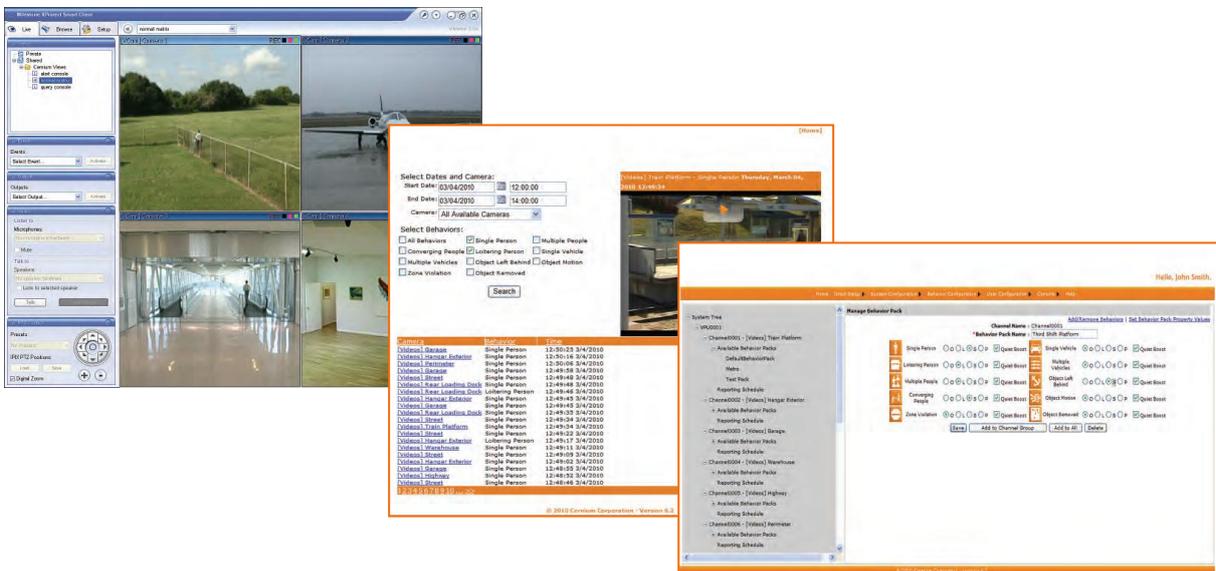

Perceptrack
Highlights of Perceptrack solution (IP & Analogue)

Perceptrak is a software application that seamlessly integrates with MilestoneTM XProtectTM Enterprise video management system.

With Perceptrack you define what is important and Perceptrak delivers it in real time so you can monitor, distribute, store and search video on an entirely new and powerful manner.

Market powerful analytical capabilities - with the most advanced tests available, proven in dozens of demanding commercial installations with more than 3 million hours.

Tailored to your Security Policies - allows any combination of behavior on all cameras.

Intuitive navigation - very easy to use, simple interface with point-and-click navigation, which requires minimal user training.

Quick Search - performs super-fast meta data-based event retrieval and video playback with intelligent search capabilities.
